

Reflection on Assignment 4 – System Development @ Credence

The online talk by Ms. Qistina Batrisyia from Credence on 28/12/2023 was a real eye-opener! She spilled the beans on what goes on behind the scenes in system development at Credence, and it was fascinating. The focus on analytics was a big deal, showing how systematic data analysis helps in making smart decisions. Plus, the tools they use to increase efficiency and productivity were impressive.

One important point was about the future of being a system developer. Ms. Qistina pointed out that things are changing fast, with new languages, frameworks, and tools popping up. This means we've got to keep learning and developing our skills to stay in the game. Self-learning is becoming super important, and it's like a secret weapon for surviving in the competitive tech world.

Security is another big deal. Ms. Qistina highlighted that protecting data is a top priority. In the future, as AI and machine learning become more common, we need to be on the ball with these technologies too. It's like a sneak peek into the challenges ahead.

Knowing all this gives us a heads up on what's coming in computer science. We've got to be adaptable, keep learning, and be ready for whatever tech throws at us. Staying effective and competitive in system development means being on the cutting edge, and this talk was a great roadmap for that journey.
